

Swichgage® Shutdown Panel Kit

Model W0270

The W0270 is a compact, low-profile Swichgage shutdown panel kit. It is designed to fit the following power units:

- Caterpillar 3054 and 3056
- Perkins 1004 and 1006
- Detroit Diesel 1000 Series.

A universal shock-mounted bracket allows mounting on either side of the engine or on top for your power unit configurations. The kit is ready for quick, easy installation with provision for installing customer supplied ignition/start key switch. All wiring is included in the panel.

This panel kit is ideal for all types of power unit applications – irrigation pumps, grain dryers, compressors, generators, etc.

Features

- Engine oil pressure monitoring Swichgage instrument (20P-F)
- Coolant temperature monitoring Swichgage instrument (20T-F)
- Voltmeter (VM12/VM24)
- Closed-loop 518PH Magnetic Switch
- Emergency stop button (PB128S)
- Provision for throttle cable
- Provision for customer supplied key switch (loom is pre-wired – mount and plug-in)
- Provision for optional tachometer or hourmeter (loom is pre-wired)
- Provision for one additional Swichgage instrument such as irrigation pump discharge pressure monitoring
- All items pre-wired including tachometer or hourmeter
- Complete external wiring harness including wiring for pre-heat and shutdown solenoid
