

Compatible with modern programming languages including C# and C++

Design with powerful 3rd party development tools like QT and Crank Storyboard

Cloud-based containers for version management

Share development keys with your team to secure displays easily

Subscribe displays to OpenPV® Projects to enable over-the-air updates

Supports Windows and Ubuntu development environments and Mac will be supported in the future

EMPOWERING DEVELOPER CHOICE

Enovation Control's OpenPV® Software Platform is a sophisticated set of tools that gives developers the flexibility to design the UI/UX of our new Linux-based displays (OpenView™ product family) with powerful 3rd party development tools like Crank Storyboard and Qt.

Gone are the days of being limited to a single proprietary tool to develop applications for Enovation Controls displays, OpenPV® opens the door for you to leverage a larger ecosystem of talent and resources.

After completing your application, simply import your design file from your selected development tool and generate your package with a single click.

SUPPORTED U/I TOOLS

ENOVATIONCONTROLS.COM/OPENPV

SEAMLESS INTEGRATION, LIMITLESS POTENTIAL

Crank Storyboard

QT

OPENPV® WORKFLOW

Run/Test the application in a development runtime on a Windows or Ubuntu desktop

Package the design as .OPV file using OpenPV®

Load the .OPV file to the display via USB-C

OpenView™ S70

Supports OpenView™ family hardware

With a paid subscription, you will be able to access additional features through **OpenPV® Projects**. These features will support team collaboration within a project and include cloud-based containers where you can upload your design package to manage various version releases. You can also enable over-the-air software updates for each **Project**.

Cloud-based containers for version management

Collaborate with your team to achieve your implementation

Subscribing displays to enable over-the-air update feature
